introduction

It is of vital importance to keep accurate records of what you have performed in your Magickal workings.

These details are far too important to leave to your memory, for you most definitely will not remember when you did something, what incenses were used, what perfume was used, where the planets were, etc.

This is important information if, in the near future, the same ritual needs to be repeated word for word, to reinforce the energy raised in the first instance, or to emulate a spell that you performed which was extremely successful!

This book has been compiled for you to use, to provide a need for all kinds of Magickians, Occultists, Witches and Pagans, so you are able to keep your important ritual records safe, together and available at a moments notice.

This is a priceless book for the Magickal practitioner, as it will become an accurate record of your own Magickal development.

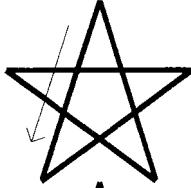

One major reluctance for not keeping accurate records of any Magickal working, is the laborious process of writing out EVERYTHING that has been used and what has occurred. This book of records is unique because it has a pre-printed format for keeping records neat and accurate. Other basic information is provided for your convenience in this book, as well as a 'family tree' for the development of your working group/coven. The results of your Magickal workings can be written into your records when they manifest themselves, again giving you a very accurate record of your Magick in action!

magickal pentagrams

Pentagrams are used within many rituals as a method of invoking and banishing energies. They are drawn in the air, with a wand, or sword or Athame, in the direction of the arrow, whilst using creative visualization to actualise the image.

magickal planetary hours

The hours of the day each have a planetary length and attribution. The length of the hours varies depending upon the time of the year, with long days in the summer and vice versa in winter. In the table below, you will see the attribution for each hour of day and night, with Hour One starting at sunrise and sunset.

To calculate the length of each planetary hour, calculate how many hours of daytime (nighttime) there are in each day, using the information in the diary as to sunrise and sunset. Divide this figure by twelve, to give the length of each planetary hour.
